

# TOGAF certification courses

## Instructor-led

### Course objective and pre-requisites

This instructor-led course provides detailed training in TOGAF 8 (Enterprise Edition) and leads to certification by The Open Group.

Students should already have an understanding of IT or Enterprise architectures.

### Case study develops understanding

The course takes students through the TOGAF material using a case study. Throughout the course the instructor assesses each student's understanding of TOGAF and their ability to apply TOGAF to the case study. The instructor's final assessment leads to successful students being nominated for certification by The Open Group.

### Course duration

TOGAF 8 is a four-day course.

### Course content

During the course the student will cover:

- The business rationale of enterprise architectures and TOGAF
- Architecture principles and their development
- Architecture views & viewpoints, patterns
- Architecture goals and architecture governance
- Requirements engineering using business scenarios
- The TOGAF Architecture Development Method (ADM) and deliverables including business, data, application and technology architectures
- An introduction to building blocks and their relationship to ADM
- The enterprise continuum with supportive architectures
- The components of TOGAF including the Technical Reference Model
- Architecture maturity assessments
- Architecture skills framework
- Other architecture frameworks
- Tools, techniques and methods for architecture development

### Alternative approaches to certification

There are two alternatives to the instructor-led course. Both lead to certification. These are an

- instructor-led webinar supported by a workbook and mentoring.
- eLearning CD supported by a workbook and mentoring.

In both cases assessment by the mentor leads to certification.
